## ***Stop Pollution***

Pollution is one of the biggest problems our planet faces. It happens when dangerous substances like trash, chemicals, and smoke enter the air, water, and land making them dirty and unsafe. There are three main types of pollution: air pollution, water pollution and land pollution.

Air pollution comes from factories, cars and burning things. It makes the air dirty and car cause problems for people's lungs and health. Water pollution happens when people throw chemicals, plastic, and waste into rivers, lakes and oceans . This makes the water unsafe for fish and other sea animals. Humans cause land pollution by throwing trash on the ground. It makes the land dirty and harms plants and animals.

Pollution hurts the Earth and can damage the environment for many years. We must take care of our planet by reducing pollution. We should recycle things like paper, plastic, and glass and avoid throwing trash on the ground. Using less plastic and keeping our water and air clean will help protect the Earth. We must work together to stop pollution and create a healthier environment for animals, plants and people.
