Read the text then do the following activities:

ChatGPT stands for "Generative Pre-trained Transformer", a form of artificial intelligence (AI) that processes request and helps to create accurate responses automatically. It has started a revolution in the way we interact with technology. **Its** advanced language capabilities offer numerous advantages and students in particular can get a lot of good out of it, but also raise important concerns. **(§1)**

The app is a powerful tool that, when used correctly, can help students and self-learners save time on **their** writing. Whether you need ideas for an essay, a list of synonyms for a particular word or a quick summary of something you read, it will help you with the answers faster than you could ever come up with. Moreover, this chatbot can communicate in multiple languages, making it a global tool for education, translation, and intercultural communication. **(§2)**

However, this virtual assistant has negative aspects. One of the most potential downsides of relying too heavily on Chat GPT is the risk of losing the ability to think critically and independently, as students might prefer quick answers over deep analysis. **(§3)**

In summary, ChatGPT is a sophisticated system with a huge potential when used responsibly. It's important to take advantage of its strengths while remaining aware of its limits. **(§4)**
