School Year: 2025-2026 **Full name:……..**

First Term English Exam

Around the world, the amount of waste produced by households and communities is increasing every year. Modern lifestyles encourage people to buy more products, replace items quickly, and throw things away without much thought. This growing pattern has serious consequences for the environment, as unmanaged waste can pollute the air, contaminate water source, and damage natural habitats.

Reducing waste begins with choosing what **we** buy and how we use it. Simple habits, such as planning meals, avoiding unnecessary purchase, and choosing durable items instead of disposable ones; help limit the amount of waste we produce each day. Families can also reduce their environmental impact by sorting recyclable materials like paper, glass, and plastic.

Reusing and recycling items are other effective strategies. Donating clothes, sharing books, or repurposing containers can reduce pressure on natural resources. Repairing broken items instead of immediately replacing **them** also prevents unnecessary waste from entering landfills.

Overall, reducing waste is about making more thoughtful choices. By consuming responsibly, reusing materials, and recycling what we can, we help conserve resources and protect ecosystems. If communities work together, they can significantly reduce waste and support a healthier, more sustainable planet for future generations.

Adapted from environmental guidelines published by the U.S EPA

A- Reading Comprehension:

1. **Say whether the following statements are *true* or *false:***
   - **a-** Modern lifestyles contribute to the rise in waste because people replace their products quickly.
