Third Term Test of English

Full name:.....

Read the text carefully and do the activities.

Science fiction shows us what the future might be like. The creators imagine worlds that are very different from ours today, filled with amazing technology.

As time passes and technology improves, some of the ideas from these futuristic worlds become real. Things **that** used to only exist in movies and TV are now everyday things.

In many cases, these technologies are actually inspired by science fiction. For example, Martin Cooper, **who** invented the first mobile phone, got the idea from a "Star Trek" episode where Captain Kirk uses a communicator to call for help. Also, movies like "iRobot" and "Total Recall" introduced the idea of driverless cars.

Moreover, Video calls made **their** appearance in science fiction very early. In 1927, a movie called "Metropolis" had a scene with a video phone on the wall. Since then, video calls have been shown in many science fiction movies like "2001: A Space Odyssey," "Blade Runner," "Back to The Future II" and many more.
